Non-Technical Skills for Surgeons (NOTSS)

RCSEd's NOTSS programme supports surgeons worldwide in developing critical non-technical skills to ensure safer surgery and better patient care.

BOARD ROOM - October 11th - 9:00 AM - 4:00 PM

VSI member: 6000 INR ++, Non-VSI Member: 10000 INR ++ (limited to 16 participants).

A behaviour rating system based on a skills taxonomy

The aim of the NOTSS project was to develop and test an educational system for assessment and training of non-technical skills in the intra-operative phase of surgery. NOTSS is a behaviour rating system based on a skills taxonomy that allows valid and reliable observation and assessment of four categories of surgeons' non-technical skill: situation awareness, decision making, communication & teamwork, and leadership.

These are the essential non-technical skills surgeons need to perform safely in the operating room and NOTSS allows measurement of several ACGME (Accreditation Council for Graduate Medical Education) competencies, including professionalism, interpersonal and communication skills, and systems-based practice. The skills taxonomy can be used to structure training and assessment in this important area of surgical competence.

The Royal College of Surgeons of Edinburgh has been successfully running a NOTSS Masterclass in observing and rating behaviour for both consultant/attending and trainee surgeons since 2006. Faculty development has also occurred for groups in North America, East Africa, Japan, Australasia and Malaysia, all of whom now run their own NOTSS courses. NOTSS has been adopted by the Royal Australasian College of Surgeons as part of their competence assessment and recommended by the ACGME (Accreditation Council for General Medical Education) for workplace assessment in the UK.
